

# STORMRIDER

## Welcome to the Center for Weather Control

The CWC is a research institute dedicated to the study of severe storm systems and to the development of methods to control these storms. Today, the CWC would like to introduce you to its newest invention: a flying weather laboratory known as "StormRider."

**StormRider**

**Storm Diffuser**

The storm diffuser is launched into storms, where it explodes and causes their energy to dissipate. One diffuser is loaded onto each StormRider.

## Storm Control Strategy

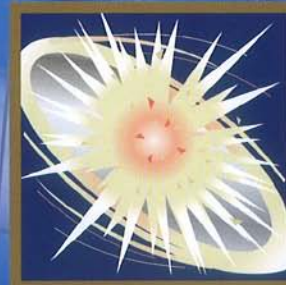

- 1 Pilot into the eye of the storm.

- 2 Launch the storm diffuser.

- 3 Explosion dissipates storm system energy.

We hope you enjoy this demonstration of state-of-the-art storm control technology aboard StormRider!

- Fasten your seatbelt once you are on board.
- Please place your personal articles under the seat.
