

WESTERN RIVER RAILROAD

All aboard a steam train
for a trip back to the frontier days of America!

During the Old West era, steam trains connected the cities of the East with settlements on the western frontier. The Native Americans of that time called the trains "iron horses" for their appearance as they traveled across the great plains with smoke streaming from the smokestack.

The four Western River Railroad trains are named for famous American Rivers.

And now, a preview of
some points of interest

Pioneers would transfer here and catch a steamboat or stagecoach to continue their journey west.

Native Americans followed the migrating buffalo, hunting it for food and using the hides to make clothing and teepees, which were easy to transport.

Strange happenings at the West's biggest gold mine caused it to be abandoned long ago. The gigantic bones found here indicate that dinosaurs lived here in ages past.

The climax of your journey is a trip back in time to a very special place!

- For your safety, please remain seated and keep your arms and legs inside during the ride.
- Please refrain from eating, drinking or smoking. Blowing smoke is the locomotive's job!
